Summary

As a final-year engineering student specializing in Data Science, I possess a robust foundation in Python, SQL, and statistical analysis, along with hands-on experience in developing machine learning models and data preprocessing. My internship at SoftPro provided me with practical exposure to analytical workflows and real-world datasets. I am eager to contribute to impactful solutions in a dynamic organization

Technologies

Languages: Python, SQL, HTML, CSS, JavaScript

Technologies: Django, Pandas, NumPy, Scikit-learn, Tensorflow, Keras

Tools: Jupyter Notebook, PhpMyAdmin, VS Code, Git and GitHub

Visualization: Microsoft Excel, Power BI, Matplotlib, Seaborn

Database: SQLite, MySQL, MongoDB

Experience

Data Science, SoftPro India –Internship

Nov 2025 – Now

- Worked on data analysis and preprocessing using Python
- Used libraries like Pandas, NumPy, and Matplotlib
- Built basic machine learning models for prediction tasks
- Cleaned and analyzed datasets to extract insights
- Worked with Microsoft Excel for data cleaning, reporting, and basic analysis
- Created interactive dashboards and visual reports using Power BI
- Gained hands-on experience with real-world data

Projects

House Price Prediction(Django)

github.com/ratnesh/HPP

- Developed a machine learning-based house price prediction system using Python and Django.
- Trained predictive models on real estate datasets to estimate house prices based on features such as location, area, number of bedrooms, and amenities.
- Integrated the trained ML model into a Django web application for real-time price prediction.
- Designed responsive user interfaces and forms for seamless user interaction.
- Implemented data preprocessing, model evaluation, and result visualization to improve prediction accuracy.

Disease Prediction System(streamlit)

github.com/ratnesh/Disease

- Developed a machine learning-based disease prediction system using Python.
- Trained and evaluated predictive models on healthcare data.
- Developed an interactive Streamlit dashboard for user input and prediction results

Sales Data Analysis (Python)

github.com/ratnesh/sales

- Built a regression model using Scikit-learn for sales forecasting.
- Performed feature selection and data preprocessing
- Evaluated model performance using R^2 score
- Improved prediction accuracy through model tuning

Education

IET Dr. Ram Manohar Lohia Avadh Univesity,Ayodhya,B.Tech in IT

Sept 2022 – Now

Coursework: Data Structures and Algorithms,DBMS,Machine Learning,AI,Python Programming,Operating System,Computer Networks

Activities

Counting Incharge And Guinness World Record Holder: Ayodhya

Divya Deepotsav 2023-2026

- Led diya count operations for Guinness World Record event (25 lakh+ diyas), coordinating 400+ volunteers across 1 ghats to ensure accurate reporting and official validation.
- Coordinated real-time diya data verification and final reporting for Guinness World Record validation

Certifications

Data Science, SoftPro India –Internship

Python, CodeSoft –Training
